- My short-term goal is to find a position where I can use the knowledge and strengths that I have. Many challenges and opportunities to advance. English working communication is perfect for improving my language skills.

- And to top it off, I'm dreaming big – reaching new heights in the organization! It might sound like a stretch, but why not I've got a treasure trove of innovative ideas, and I'm all in when it comes to putting in the hard work to make it happen. Let's make this journey exciting!

◆ EDUCATION

◆ 07/2013 - 07/2017 **Nha Trang University**

Information Technology (Very Good Degree)

◆ WORK EXPERIENCE

◆ 05/2024 - Now **Senior Full Stack Developer**

Rakkar Digital (https://www.rakkardigital.com)

Rakkar is Asia's leading digital asset custodian. It delivers ultra-secure digital asset and crypto custody with full segregation and unparalleled agility in service.
Team size: 4 (Fullstack team)
Position: Senior full-stack developer
Tech stack: NestJS, React, NodeJS, TypeScript, web development practices, and microservice development practices.
Responsibilities:

- Develop and maintain services to ensure the business requirements are worked properly and secure.
- Develop and maintain UI components.
- Collaborate with team engineers from other countries to improve our product, architecture, and engineering practices.

◆ 12/2020 - 04/2024 **Senior Front End Developer**

Job Logic (https://www.joblogic.com/)

Job Logic is a UK company - **a leading industry in service management software,** providing field service businesses (i.e, HVACR, Plumbing & Heating and Electrical Contracting and Maintenance) across the world with an all-in-one management solution SaaS / CRM.
Team size: 18 (Front-end team)
Position: Senior front-end developer
Tech stack: Vue - Vuex, React - Redux, Jquey, Kendo, Core .NET C# , Mysql, Azure.
Responsibilities:

- **Training** the system business and **mentoring** new members when coming to the team both Viet Nam and UK members. Sharing the technical, advice solution, and review code. All my training members are happy and quickly catch up to the front-end work.
- **Develop new features** based on customers' requirements. I was involved in previewing English documents, giving feedback to the BA team, R&D solution, implementation, and integration with the Backend team.I work under a team that always trusts and shows the

best quality to the product (less bugs, high performance, fastest implementation time)

- **Join the R&D team** to research solutions and technologies and then apply them to the system. Especially for issues from third-party libraries used from one upon a time, ex: Kendo, Survey.
- **Join the maintenance team** for:
  - Bug fixings.
  - Manage sonar qube - make sure code is pushed clear by given standards to limit the smell coding and gradual coding is followed by structure.
  - Enhance the system from View-MVC, and then transform them to Vue tech, optimizing for improved performance, scalability, and user experience.

Achievements:

- Build several common components (select, multi-select, request services...) - lay the foundation for team feature development
- Planner - one of the company's top features, has been utilized by a huge number of users coz Its intuitive drag-and-drop functionality, coupled with visually appealing design, offers unparalleled convenience. and other features.
- In transitioning to a squad team, the team will prioritize deciphering unclear customer requirements—I'm among the volunteers, and I am proud of that.
- Join to build and maintain successfully Axa Project - UK Insurance
- Join to build and maintain successfully Portal Project - where customers of customers can monitor, also act on invoices, credit... related.
- Join to build React.js internal tool to serve the tracking and analyzing customer usage for the management. UX is highly evaluated from the higher.
- Fortunately, I had the chance to work on-site at a company in the UK.

- Excellent
  | React - Redux | Vue.js - Vuex | JavaScript |

- Intermediate
  | Nest.js | NodeJS | Typescript | Pug - Less - Sass | HTML5 | CSS 3 | ExpressJS |

  | English | Angular - Native Script | JQuery |

- Beginner
  | Docker | AWS - Azure - Heroku | .NET Core | Wordpress | MongoDB | GraphQL |

  | MySQL |

◆ PERSONAL PROJECT

- 06/2023 - Now

  Daidev

  Project URL: https://daidev-bc51fcbb2e2d.herokuapp.com/

  My platform for sharing knowledge where I believe everyone can benefit, offering free templates that I've personally developed and refined. Users are welcome to register on my website and freely utilize these resources for their own projects.

  Technical used: I'm developing a web application using React for the front end, Express.js for the backend, MongoDB for the database, and GraphQL for querying data. The application will be deployed on Heroku once it's completed.
